

All students want to be academically successful, but to achieve this student must to have some important qualifications. There are motivation, time-management and sleep quality. The first cause of being an academically successful student is motivation. A good case in point is research by professor Kelli D. Whittington from McKendree university which says that only motivated students can achieve academic success. The second cause of being an academically successful student is the time-management, a successful student manage his or her time to allocate time to study and pass assignments before deadlines. Personally, I can say that by using time-management techniques I upgraded my academic performance. The final primary cause of being an academically successful student is sleeping enough. The research by Murray university says that "Better sleep quality can improve student's grades and increase the likelihood of finding a career after college". All things are covered, as a result of motivation, time-management and sleep quality student can be academically successful.

Driving a car and a bike is different because drivers have different duration of the trip, ecological impact, and health condition. First of all, bike and car drivers have different duration of the trip. The driver of a car can get to his or her destination fast because a car has a high speed. On the other hand, bike rides much slower so, it needs more time to get to the destination. Therefore, a bike driver needs to spend much time on far trips. The second difference is that car and bike drivers have a different ecological impact. The reason is that car generates a lot of pollution which poison nature. In contrast, the bike is fully ecological transport and do not generate any pollution. As a result, bike drivers are environmentally friendly people. Finally, bike and car drivers have a different health condition. For this reason, car drivers often have problems with health because they spend a lot of time sitting in the car. On the other hand, bike drivers have good heart rhythm and trained legs because they keep pedal. Therefore, bike drivers have a good health condition. To conclude, car and bike drivers have different duration of the journey, environment impact and health condition.
